The Early Modern City 1450-1750 Christopher R. Friedrichs 2014-06-06 A pioneering text which covers the urban society of early modern Europe as a whole. Challenges the usual emphasis on regional diversity by stressing the extent to which cities across Europe shared a common urban civilization whose major features remained remarkably constant throughout the period. After outlining the physical, political, religious, economic and demographic parameters of urban life, the author vividly depicts the everyday routines of

city life and shows how pitifully vulnerable city-dwellers were to disasters, epidemics, warfare and internal strife.

The Rise and Decline of England's Watchmaking Industry, 1550-1930 Alun C. Davies
2022-04-08 This survey of the rise and decline of English watchmaking fills a gap in the historiography of British industry. Clerkenwell in London was supplied with "rough movements" from Prescot, 200 miles away in Lancashire. Smaller watchmaking hubs later emerged in Coventry, Liverpool, and Birmingham. The English industry led European watchmaking in the late eighteenth century in output, and its lucrative export markets extended to the Ottoman Empire and China. It also made marine chronometers, the most complex of hand-crafted pre-industrial mechanisms, crucially important to the later hegemony of Britain's navy and merchant marine. Although Britain was the "workshop of the world", its watchmaking industry declined. Why? Firstly, because cheap Swiss watches were smuggled into British markets. Later, in the era of Free Trade, they were joined by machine-made watches from factories in America, enabled by the successful application to watch production of the "American system" in Waltham, Massachusetts after 1858. The Swiss watch industry adapted itself appropriately, expanded, and reasserted its lead in the world's markets. English watchmaking did not: its trajectory foreshadowed and was later followed by other once-prominent British industries. Clerkenwell retained its pre-industrial production methods. Other modernization attempts in Britain had limited success or failed.

A Business History of Britain, 1900-1990s David J. Jeremy 1998 *Business History* has developed as an academic subject since the 1970s. However, the insights of scholarly business historians have not been widely accessible to students because of the lack of a suitable textbook on which to base a one- or two- semester course. The present work is designed to fill this gap. Jeremy, drawing on recent research and debate, plainly outlines the history of major aspects of business behaviour in twentieth century Britain. Moreover, he presumes little prior knowledge of history, business, or economics on the student's part. The text is organized in three sections: the business environment; business organisation; and entrepreneurship and management. The first section outlines the changes that have most powerfully affected business, including global political and economic developments, and technological changes. The second section deals with business structures and strategies, merger waves, multinationals and small firms. Special attention is given to the role of the City of London and the financial sector, and also to the revolution in retailing. The third part of the text examines the social origins, education, and training of business leaders and evaluates the performance of British management with respect to research and

development, labour relations, and marketing. The last two chapters are about the shaping of company culture and business ethics. Common to all the chapters are: the chapter's objectives an outline of chapter contents a concluding list of points the student should have learned discussion questions a guide to further reading A variety of key ideas or viewpoints is presented in boxes. Numerous tables summarise numerical data. Charts and maps have been included where appropriate.

The Man Who Built the Swordfish Adrian Smith 2018-04-30 Sir Richard Fairey was one of the great aviation innovators of the twentieth century. His career as a plane maker stretched from the Edwardian period to the jet age - he lived long enough to see one of his aircraft be the first to break the 1000mph barrier; and at least one of his designs, the Swordfish, holds iconic status. A qualified engineer, party to the design, development, and construction of the Royal Navy's state-of-the-art sea planes, Sir Richard founded Fairey Aviation at the Admiralty's behest in 1915. His company survived post-war retrenchment to become one of Britain's largest aircraft manufacturers. The firm built a succession of front-line aircraft for the RAF and the Fleet Air Arm, including the iconic Swordfish. In addition, Fairey Aviation designed and built several cutting-edge experimental aircraft, including long-distance record-breakers between the wars and the stunningly beautiful Delta 2, which broke the world speed record on the eve of Sir Richard's death in 1956. Fairey also came to hold a privileged position in the British elite - courting politicians and policymakers. He became a figurehead of the British aviation industry and his successful running of the British Air Commission earned him a knighthood. A key player at a pivotal moment, Fairey's life tells us much about the exercise of power in early twentieth-century Britain and provides an insight into the nature of the British aviation manufacturing industry at its wartime peak and on the cusp of its twilight years.

A University Education David Willetts 2017-11-24 Universities have a crucial role in the modern world. In England entrance to universities is by nation-wide competition which means English universities have an exceptional influence on schools - a striking theme of the book. This important book first investigates the university as an institution and then tracks the individual on their journey to and through university. In *A University Education*, David Willetts presents a compelling case for the ongoing importance of the university, both as one of the great institutions of modern society and as a transformational experience for the individual. The book also makes illuminating comparisons with higher education in other countries, especially the US and Germany. Drawing on his experience as UK Minister for Universities and Science from 2010 to 2014, the author offers a powerful account of the value of higher education and the case for more expansion. He covers controversial issues in which he was involved from access for disadvantaged students to the introduction of £9,000 fees. The final section addresses some of the big questions for the future, such as the the relationship between universities and business, especially in promoting innovation.. He argues that the two great contemporary trends of globalisation and technological innovation will both change the university significantly. This is an authoritative account of English universities setting them for the first time in their new legal and regulatory framework.
