Medical Emergency Teams Michael A. DeVita 2007-07-03 Why Critical Care Evolved METs? In early 2004, when Dr. Michael DeVita informed me that he was considering a textbook on the new concept of Medical Emergency Teams (METs), I was surprised. At Presbyterian-University Hospital in Pittsburgh we introduced this idea some 15 years ago, but did not think it was revolutionary enough to publish. This, even though, our fellows in critical care medicine training were all involved and informed about the importance of "Condition C (Crisis)," as it was called to distinguish it from "Condition A (Arrest)." We thought it absurd to intervene only after cardiac arrest had occurred, because most cases showed prior deterioration and cardiac arrest could be prevented with rapid team work to correct precluding problems. The above thoughts were logical in Pittsburgh, where the legendary Dr. Peter Safar had been working since the late 1950s on improving current resuscitation techniques, first ventilation victims of apneic from drowning, treatment of smoke inhalation, and so on. This was followed by external cardiac compression upon demonstration of its efficiency in cases of unexpected sudden cardiac arrest. Dr. Safar devoted his entire professional life to improvement of cardiopulmonary resuscitation. He and many others emphasized the importance of getting the CPR team to out-of-hospital victims of cardiac arrest as quickly as possible.

Resources for Nursing Research Cynthia Clamp 2005-01-11 'The 4th edition of this extensive text is an outstanding resource prepared by nurses (and a librarian) for nurses. In a structured and helpful style it presents thousands of items from the literature - published papers, reports, books and electronic resources - as a clear, accessible, and most of all useful collection. The efforts to signpost and lead the reader to the sought-for information are effective and well-conceived, and the "How to use this book" section is remarkably simple...the book should be found in every nursing and health library, every research institute and centre, and close to many career researchers' desks' - RCN Research This latest edition of Resources for Nursing Research provides a comprehensive bibliography of sources on nursing research, and includes references for books, journal papers and Internet resources. Designed to act as a 'signpost' to available literature in the area, this Fourth Edition covers the disciplines of nursing, health care and the social sciences. Entries are concise, informative and accessible, and are arranged under three main sections: - 'Sources of Literature' covers the process of literature searching, including using libraries and other tools for accessing literature - 'Methods of Inquiry' includes an introduction to research, how to conceptualize and design nursing and health research, measurement and data collection, and the interpretation and presentation of data - 'The Background to Research in Nursing' encompasses the development of nursing research; the profession's responsibilities; the role of government; funding; research roles and careers; and education for research. Fully revised and updated, the Fourth Edition includes just under 3000 entries, of which 90% are new. It has extensive coverage of US, UK literature and other international resources. This new edition will be an essential guide for all those with an interest in nursing research, including students, teachers, librarians, practitioners and researchers.

The Acute-Care Nurse Practitioner Judy Rashotte 2013-12-01 From the moment it was first proposed, the role of the nurse practitioner has been steeped in controversy. In the fields of both nursing and medicine, the idea that a nurse practitioner can, to some degree, serve as a replacement for the physician has sparked heated debates. Perhaps for that reason, despite the progress of the nurse practitioner movement, NPs have been reluctant to speak about themselves and their work, and their own vision of their role has thus remained largely invisible. Current research is dominated by instrumental and economic modes of discourse and tends to focus on the clinical activities associated with the role. Although information about demographics, educational preparation, position titles, reporting relationships, and costs of care contribute to our understanding, what was missing was an exploration of the lived experience of the nurse practitioner, as a means to deepen that understanding as well as our appreciation for their role. The Acute-Care Nurse Practitioner is based on in-depth interviews with twenty-six nurse practitioners working in acute-care settings within tertiary-care institutions all across Canada. Employing a hermeneutic approach, Rashotte explores the perspectives from which NPs view their reality as they undergo a transformational journey of becoming—a journey that is directed both outward, into the world, and inward, into the self. We learn how, in their struggle to engage in a meaningful practice that fulfills their goals as nurses, their purpose was hindered or achieved. In large part, the story unfolds in the voices of the NPs themselves, but their words are complemented by descriptive passages and excerpts of poetry that construct an animated and powerful commentary on their journey. Poised between two worlds, NPs make a significant contribution to the work of their colleagues and to the care of patients and families. The Acute-Care Nurse Practitioner offers an experiential alternative to conventional discourse surrounding this health care provider's role.

Critical Care Nursing in Resource Limited Environments Chris Carter 2019-06-05 All hospitals have critically ill patients, and their management depends upon the resources available. In many low income countries, critically ill patients may be admitted to a critical care unit; however, many are nursed on wards due to a lack of critical care beds or simply die before they reach the hospital. This book provides guidance on the unique situations for nurses working in these challenging environments, while considering ethical decision-making, providing appropriate services, and the types of patients admitted. Topics covered include: working in a resource limited environment; cultural awareness and international agendas; provision and access to healthcare services; ethical considerations in the context of resource limited environments; best practice and knowledge regarding rehabilitation, pain management, managing a major

incident; relevant research concerning resource limited environments. Critical Care Nursing in Resource Limited Environments prepares readers to consider how best to utilise their skills and deliver safe patient care within a resource limited context. Each easy-to-read chapter provides core knowledge and relevant research, as well as useful ideas and solutions, with further reading sections to signpost readers to key international resources. This text provides practical ideas for nurses working in critical care and defence nursing, and acute areas in resource limited environments.
