Medical Emergency Teams Michael A. DeVita 2007-07-03 Why Critical Care Evolved METs? In early 2004, when Dr. Michael DeVita informed me that he was considering a textbook on the new concept of Medical Emergency Teams (METs), I was surprised. At Presbyterian-University Hospital in Pittsburgh we introduced this idea some 15 years ago, but did not think it was revolutionary enough to publish. This, even though, our fellows in critical care medicine training were all involved and informed about the importance of “Condition C (Crisis),” as it was called to distinguish it from “Condition A (Arrest).” We thought it absurd to intervene only after cardiac arrest had occurred, because most cases showed prior deterioration and cardiac arrest could be prevented with rapid team work to correct precluding problems. The above thoughts were logical in Pittsburgh, where the legendary Dr. Peter Safar had been working since the late 1950s on improving current resuscitation techniques, first ventilation victims of apnea from drowning, treatment of smoke inhalation, and so on. This was followed by external cardiac compression upon demonstration of its efficiency in cases of unexpected sudden cardiac arrest. Dr. Safar devoted his entire professional life to improvement of cardiopulmonary resuscitation. He and many others emphasized the importance of getting the CPR team to out-of-hospital victims of cardiac arrest as quickly as possible.

The Acute-Care Nurse Practitioner Judy Rashotte 2013-12-01 From the moment it was first proposed, the role of the nurse practitioner has been steeped in controversy. In the fields of both nursing and medicine, the idea that a nurse practitioner can, to some degree, serve as a replacement for the physician has sparked heated debates. Perhaps for that reason, despite the progress of the nurse practitioner movement,

NPs have been reluctant to speak about themselves and their work, and their own vision of their role has thus remained largely invisible. Current research is dominated by instrumental and economic modes of discourse and tends to focus on the clinical activities associated with the role. Although information about demographics, educational preparation, position titles, reporting relationships, and costs of care contribute to our understanding, what was missing was an exploration of the lived experience of the nurse practitioner, as a means to deepen that understanding as well as our appreciation for their role. The *Acute-Care Nurse Practitioner* is based on in-depth interviews with twenty-six nurse practitioners working in acute-care settings within tertiary-care institutions all across Canada. Employing a hermeneutic approach, Rashotte explores the perspectives from which NPs view their reality as they undergo a transformational journey of becoming—a journey that is directed both outward, into the world, and inward, into the self. We learn how, in their struggle to engage in a meaningful practice that fulfills their goals as nurses, their purpose was hindered or achieved. In large part, the story unfolds in the voices of the NPs themselves, but their words are complemented by descriptive passages and excerpts of poetry that construct an animated and powerful commentary on their journey. Poised between two worlds, NPs make a significant contribution to the work of their colleagues and to the care of patients and families. The *Acute-Care Nurse Practitioner* offers an experiential alternative to conventional discourse surrounding this health care provider's role.
