Canine and Feline Gastroenterology - Brent D. Jones 1986

Feline Gastroenterology - Fabio Procoli 2021-10-29T00:00:00+02:00 The aim of this book is to focus on problems unique to the alimentary tract in comparison to dogs and to discuss them in detail, but also to highlight areas where knowledge is lacking derived from comparison with other companion animal species or humans. Instead of being a comprehensive work of "all things cat", this book aims to shine a light on topics that are novel, such as the microbiome or probiotics, and might not have been covered in other standard textbooks. This book focuses on "a medic's perspective" on feline alimentary tract health, which starts with differential diagnoses in a structured way based on the most common clinical signs. It also includes the invaluable input from specialties we so often draw on in clinical practice, namely laboratory diagnostics, diagnostic imaging, clinical pathology and histopathology, and nutrition, which can be a particular challenge in cats. It also covers feline-specific infectious and neoplastic diseases. Appropriate methods for retrieving adequate samples from organs of the alimentary tract in cats are discussed, and a particular challenge of differentiating inflammation from neoplasia is present in several chapters. Diagnostic and therapeutic algorithms in internal medicine for dogs and cats - Francesco Casci 2022-09-26T00:00:00+02:00 The problem-oriented approach (POA) is the method recommended by the College of Internal Medicine to address and resolve medical questions and problems. Hence the idea of creating a book based on algorithms dealing with the main clinical and laboratory abnormalities in feline clinical abnormalities, using an innovative perspective. Each one of the 85 algorithms guides the reader step-by-step with practical, cost-effective options to proceed from a general concern, laboratory abnormality, or imaging finding to a specific diagnosis and treatment. A concise summary is provided on the first page of each topic, the algorithm follows, and then succinct explanations are provided for many of the recommended steps within each algorithm. In this book, two useful and innovative aspects were included: codes and links for additional information within the algorithm. Yellow indicates the diagnostic path, red the diagnosis and bloodwork; this allows the veterinarian to be guided through the diagnostic labyrinth in order to reach the most appropriate therapy; the red boxes, the list of differential diagnoses for each problem can quickly be identified. By following the yellow boxes one can understand how to reach these diagnoses, and optimize the diagnostic protocol. Moreover, comprehensive notes, linked to the algorithms by references, give more details regarding a specific diagnostic investigation, a particular disease or the therapy recommended.
