**Higher Order Thinking Skills in the Language Classroom: A Concise Guide** Afsaneh Ghanizadeh 2020-09-11 In this book, we try to provide a practical, down-to-earth guide for those who are involved in language learning and teaching. We hope that this book will be a useful reading for those who would like to incorporate higher-order thinking skills (HOTS)-enhancing techniques in their teaching practice. We set out from the position that, although it is hardly doubtful that it is at the heart of education, critical thinking is in reality often not given its due attention in pedagogy, particularly in language education. This book offers readers some practical advice on how to implement HOTS in their own practice. It has been written to take the reader through each technique with the ultimate goal of promoting HOTS step-by-step. In the introductory chapter, we present an overview of the theory behind HOTS, its definition, its relation to Bloom's Taxonomy, its two dimensions (critical thinking and reflective thinking), and the ideas of some influential thinkers in this area. The subsequent chapters present six HOTS-enhancing techniques that classroom teachers can draw from, namely graphic organizers, critical discourse analysis, argumentation, emotion regulation and emotional intelligence enhancing techniques, reflective journals, and mindfulness-based strategies. As the book draws on a wide-ranging review of literature with exercises for direct use with language learners, we hope that this provides both theoretical and practical support for the teaching process to help language learners become effective critical thinkers. The compilation of the ideas in this book took us a long time, over a decade. Something that takes such a long time requires much engagement and life experience; so did this book.

**Handbook of Research on Advancing Critical Thinking in Higher Education** Wisdom, Sherrie 2015-07-17 The importance of critical thinking has surged as academics in higher education realize that many students, upon entering college, lack the critical thinking skills necessary to succeed. While much has been written regarding the 'lack' of critical thinking, less has been written on the success of methods implemented to develop this fundamental skill. The Handbook of Research on Advancing Critical Thinking in Higher Education explores the effective methods and tools being used to integrate the development of critical thinking skills in both undergraduate and graduate studies. Due to the difficulties associated with teaching critical thinking skills to learners of any age, this publication is a crucial addition to the scholarly reference works available to pre-service and early career teachers, seasoned educational professionals, professors across disciplines, curriculum specialists, and educational administrators.

**The Total Question Workout** Bennett E. McClellan, Ph.D. 2014-04-02 Here's the one-minute description of TQW: You have a Big Question of some kind. You know it's a Big Question because it's keeping you up at night, the outcome is important, and you don't have a ready answer. There are four stages you need to go through to answer a Big Question. I don't know where you are in the process; so let me describe the four stages. The first stage involves fully understanding your situation and your motives for wanting to resolve the question that comes from being in that situation. The second stage involves separating yourself from the situation you are in. You cannot resolve a situation if you see yourself as part of it. You have to gain perspective by separating yourself from your situation in as many ways as possible. The third stage involves letting go of something that keeps you attached to, and subject to, the situation you are in. Something is holding you back. Some fear, some projection of implications, some belief about what is possible and what is not possible. Something. As long as you hold onto these things they will hold you back. Fourth, you need to perceive new possibilities for resolving your Big Question. For various reasons, you are not able to see alternative resolutions today. You need to reframe your question in a way that will enable you to apply the substantial resources you have to address each and every part of the question. If you have a Big Question, you are stuck at one of those four stages. At which stage are you stuck? McClellan provides a complete roadmap for getting from the question you have to the question you need to answer. Dither no longer. Commit to the Total Question Workout. Address the Big Question you need to answer to take charge of running your business or your life. You can move forward. But first, you have to take the next step.

**Cultural Competence in Applied Psychology** Craig L. Frisby 2018-07-25 The first volume of its kind, this provocative book evaluates the construct of cultural competence from multiple perspectives. At the intersection of diverse disciplines and domains, contributors argue for greater clarity in understanding the cultural competence construct, a deeper level of analysis as to its multifaceted components, and call for concrete practical objectives and science-based means of measurement. Serious, nuanced discussion addresses challenges, strengths, and limitations of current cultural competence practice in terms of sociocultural concepts (e.g., race, ethnicity) and practical concepts (e.g., sensitivity in the therapeutic relationship, treatment efficacy). In addition, contributors identify future directions for research, training, and practice with the potential to spur the further evolution of this clinically important construct. This timely book: Critiques the cultural competence construct and its evaluation as it is currently disseminated within applied psychology. Compares and contrasts how cultural competence is defined within clinical, school, and counseling psychology. Analyzes difficulties and challenges in understanding the cultural competence construct as evaluated through the lens of closely related fields outside of applied psychology. Spotlights complexities in cultural competence issues pertaining to specific populations. Sets out implications for education and training, offering a detailed outline for an ideal college course in cultural competence. With this level of reasoning and rigor, Cultural Competence in Applied Psychology is sure to stimulate long-overdue dialogue and debate among professionals across a wide variety of fields, such as clinical psychology, social work, child and social psychology, psychotherapy, school psychology, and counseling.

**The Perception of People** Perry R. Hinton 2015-09-16 What are other people like? How do we decide if someone is friendly, honest or clever? What assumptions do we develop about them and what explanations do we give for their behaviour? The Perception of People examines key topics in psychology to explore how we make sense of other people (and ourselves). Do our decisions result from careful consideration and a desire to produce an accurate perception? Or do we jump to conclusions in our judgements and rely on expectations and stereotypes? To answer these questions the book examines models of person perception and provides an up-to-date and detailed account of the central psychological research in this area, focusing in particular on the social cognitive approach. It also considers and reflects on the involvement of culture in cognition, and includes coverage of relevant research in culture and language that influence the way we think and speak about others. As well as providing a valuable text in social psychology, The Perception of People also offers a direction for the integration of ideas from cognitive and social psychology with those of cultural psychology, anthropology, sociology, philosophy and social history. Clear explanation of modern research is placed in historical and cultural context to provide a fuller understanding of how psychologists have worked to understand how people interpret the world around them and make sense of the people within it. Ideal reading for students of social psychology, this engaging text will also be useful in subject areas such as communication studies and media studies, where the perception of people is highly relevant.
