A New History of Modern Computing Thomas Haigh 2021-09-14 How the computer became universal. Over the past fifty years, the computer has been transformed from a hulking scientific supertool and data processing workhorse, remote from the experiences of ordinary people, to a diverse family of devices that billions rely on to play games, shop, stream music and movies, communicate, and count their steps. In A New History of Modern Computing, Thomas Haigh and Paul Ceruzzi trace these changes. A comprehensive reimagining of Ceruzzi's A History of Modern Computing, this new volume uses each chapter to recount one such transformation, describing how a particular community of users and producers remade the computer into something new. Haigh and Ceruzzi ground their accounts of these computing revolutions in the longer and deeper history of computing technology. They begin with the story of the 1945 ENIAC computer, which introduced the vocabulary of "programs" and "programming," and proceed through email, pocket calculators, personal computers, the World Wide Web, videogames, smart phones, and our current world of computers everywhere--in phones, cars, appliances, watches, and more. Finally, they consider the Tesla Model S as an object that simultaneously embodies many strands of computing.

End State *James Plunkett 2021-07-30 A GUARDIAN POLITICAL BOOK OF THE YEAR 'End State is absolutely superb. If you're looking for a book that is honest about the problems of the future but leaves you hopeful about solutions, then this is it' Jon Richardson 'Insightful and revealing: a brilliant exploration of how ideas currently on the edge of politics could move into the mainstream' Danny Dorling, author of SLOWDOWN Can we reverse the mental health crisis by getting rid of Mondays? Is it time to stop poor people being poor by... giving them money? Can we quell the fires of populism by giving young people a say in the future? As the shockwaves of Covid 19 continue to spread, and as the smoke clears from a year of anger and unrest, many people feel forlorn about the future. In End State, James Plunkett argues that this can be a moment not of despair, but of historic opportunity - a chance to rethink, renew, and reform some of the most fundamental ways we organise society. In much the same way as societies emerged stronger from crises in the past - building the state as we know it today - we too can build a happier future. James Plunkett has spent his career thinking laterally about the complicated relationships between individuals and the state. First as an advisor to Gordon Brown, then a leading economic researcher and writer, and then in the charity sector, helping people struggling at the front-line of economic change. James combines a deep understanding of social issues with an appreciation of how change is playing out not in the ivory tower, but in the reality of people's lives. Now, in his first book, he sets out an optimistic vision, exploring nine ways in which our social settlement can be upgraded to harness the power of the digital age. Covering a dizzying sweep of geography and history, from London's 18th Century sewage systems to the uneasy inequality of Silicon Valley, it's a thrilling and iconoclastic account of how society can not only survive, but thrive, in the digital age. End State provides a much-needed map to help us navigate our way over the curious terrain of the twenty-first century.*

The Primary ICT & E-learning Co-ordinator´s Manual *James Wright 2007-05-23 [This book is] absolutely wonderful. It will be my new Bible... I have used it loads already in preparation for my ICT Mark assessment. Taking on the role of ICT co-ordinator can be quite a daunting task but this step by step guide, breaking things down into manageable chunks will be very supportive. I love the blogging idea - the comments made by the characters are very realistic. This is just what new co-ordinators need, I wish I´d had this when I took over co-ordination of ICT! - Christine Beedham, Primary ICT adviser, Warrington Every primary school has the daunting task of embedding ICT and e-learning into their curriculum. This practical manual is the first part of a two volume set that together makes up a detailed*

two year training programme for primary ICT and e-learning co-ordinators. The books combine key strategies and information with a weblog discussion from a group of ´virtual´ co-ordinators who share their problems, fears and successes over the two-year programme, based on the author´s wide experience of working with new co-ordinators and experienced staff on training programmes and in general support. Book 1 is designed specifically for co-ordinators new to the role who need starting points and broad support. It presents a structured training programme split over three terms, guiding co-ordinators through the key stages of developing and implementing ICT policy and practice, including: o auditing existing school systems o reviewing and revising the school policy for ICT o reviewing the ways in which ICT is used as a teaching and learning tool across the curriculum o examining methods for the management of technical support services o establishing a clear overview of standards in ICT, including a review of assessment procedures, moderating work, monitoring teaching and learning and creating E Portfolios. The books have a companion website, which will offer downloadable versions of the photocopiable sheets from the book, as well as links to other sources of help and advice.

Active Technologies for Network and Service Management Rolf Stadler 2003-07-31 This volume of the Lecture Notes in Computer Science series contains all papers accepted for presentation at the 10th IFIP/IEEE International Workshop on Distributed Systems: Operations and Management (DSOM'99), which took place at the ETH Zürich in Switzerland and was hosted by the Computer Engineering and Networking Laboratory, TIK. DSOM'99 is the tenth workshop in a series of annual workshops, and Zürich is proud to host this 10th anniversary of the IEEE/IFIP workshop. DSOM'99 follows highly successful meetings, the most recent of which took place in Delaware, U.S.A. (DSOM'98), Sydney, Australia (DSOM'97), and L'Aquila, Italy (DSOM'96). DSOM workshops attempt to bring together researchers from the area of network and service management in both industry and academia to discuss recent advancements and to foster further growth in this ?eld. In contrast to the larger management symposia IM (In- grated Network Management) and NOMS (Network Operations and Management S-posium), DSOM workshops follow a single-track program, in order to stimulate interaction and active participation. The speci?c focus of DSOM'99 is "Active Technologies for Network and Service Management," re?ecting the current developments in the ?eld of active and program-ble networks, and about half of the papers in this workshop fall within this category.

 The Philosopher's Stone for Sustainability Yoshiki Shimomura 2012-09-19 Industrial Product-Service Systems (IPS2), which is defined as "an integrated industrial product and service offering that delivers value in use," has expanded rapidly over the last decade. IPS2 has allowed us to achieve both high added value and high productivity and has enriched our QOL by improving the performance of products and services. We are now struggling with many awkward issues related to sustainability, but IPS2 is expected to be the "philosopher's stone" for solving these issues. Following the pattern of conferences held in Cranfield in 2009, Linköping in 2010, and Braunschweig in 2011, the fourth International CIRP Conference on Industrial Product-Service Systems, held on November 8-9, 2012, in Tokyo, will cover various aspects of IPS2. Topics planned for this year's conference reflect the latest IPS2 information in both the natural sciences and humanities and include case studies from various industries. IPS2 is still a relatively new field, so it is important to keep track of the entire context in order to promote more cross-sectional cooperation between multimodal fields and disciplines. The fourth International CIRP Conference on Industrial Product-Service Systems will serve as a vital platform for such collaborations and the discussion of new scientific ideas.

The Limitless City Oliver Gillham 2002-03 One of the great debates of our time concerns the predominant form of land use in America today -- the all too familiar pattern of commercial and residential development known as sprawl. But what do we really know about sprawl? Do we know what it is? Where did it come from? Is it really so bad? If so, what are the alternatives? Can anything be done to make it better? The Limitless City offers an accessible examination of those and related questions. Oliver Gillham, an architect and planner with more than twenty-five years of experience in the field, considers the

history and development of sprawl and examines current debates about the issue. The book: offers a comprehensive definition of sprawl in America traces the roots of sprawl and considers the factors that led to its preeminence as an urban and suburban form reviews both its negative impacts (loss of open space, increased pollution, gridlock) as well as its positive aspects (economic development, personal freedom, privacy) considers responses to sprawl including "smart growth," urban growth boundaries, regional planning, and the New Urbanism looks at what can be done to improve and counterbalance sprawl The author argues that whether we like it or not, sprawl is here to stay, and only by understanding where it came from and why it developed will we be able to successfully address the problems it has created and is likely to create in the future. The Limitless City is the first book to provide a realistic look at sprawl, with a frank recognition of its status as the predominant urban form in America, now and into the near future. Rather than railing against it, Gillham charts its probable future course while describing critical efforts that can be undertaken to improve the future of sprawl and our existing urban core areas.

 Electronic service delivery in the driver, vehicle and operator agencies in Great Britain Great Britain: National Audit Office 2008-01-16 The Driver and Vehicle Licensing Agency, the Driving Standards Agency and the Vehicle and Operator Services Agency provide services for 42 million drivers, the keepers of 36 million vehicles, 100,000 commercial vehicle operators and 19,000 authorised MoT businesses in Great Britain. The services include issuing driving licences and vehicle registration documents and conducting driving and Heavy Goods Vehicle and Public Service Vehicle roadworthiness tests. The Driver and Vehicle Licensing Agency is also responsible for collecting Vehicle Excise Duty, which raised £5 billion in 2006-07, working with a range of stakeholders, such as the police, to enforce collection of this Duty. The Agencies handled some 124 million customer transactions in 2006-07 for the range of services which could be made available electronically. This report examines six of the 15 services available electronically, in which the Agencies have invested at least £60 million to improve access and

service delivery. The services accounted for 12.6 million electronic transactions in 2006-07: applications for provisional driving licence; booking of driving tests (both practical and theory); taking driving theory tests; upgrading from a provisional to full driving licence; buying car tax or making a Statutory Off-Road Notification; and changing commercial vehicle operators' records. The Agencies' investment of some £60 million in new technology to improve access and delivery of five of these services, and their further investment in the services for booking and taking the driving theory test, have made the services easier and quicker for customers to access and less burdensome to use. After taking account of the development cost, the services should also lead to savings of at least £33 million but to achieve these take-up must increase and some aspects of the services must improve.
