Clinical Pancreatology for Practising Gastroenterologists and Surgeons Juan Enrique Dominguez Muñoz 2021-09-14 Since the first edition of *Clinical Pancreatology for Practising Gastroenterologists and Surgeons* was first published sixteen years ago, the knowledge and clinical management of pancreatic diseases have developed markedly. Thanks to the development of translational research and the "from bench to bedside" concept, much progress from the lab has been applied to clinical practice. Additionally, several highly relevant clinical trials published over the last decade have resulted in the updating and optimisation of clinical guidelines. A new and validated classification of the severity and complications of acute pancreatitis that is firmly rooted in clinical practice has become the basis for the development of minimally invasive approaches to pancreatic necrosis. The etiopathogenic knowledge of chronic pancreatitis and other pancreatopathies, like that associated with diabetes mellitus, has developed significantly. Increased study of cystic pancreatic tumours, which has been reflected in the publication of several guidelines and consensus reports over the last few years, is especially important. Most research efforts have focused on pancreatic cancer, which have led and will further lead to a significant increase in the therapeutic armamentarium against this devastating disease. Finally, many newly published studies have changed the concept, causes, clinical relevance, diagnosis and treatment of exocrine pancreatic insufficiency. Updates based on these developments and more are included in the new edition of *Clinical Pancreatology for Practising Gastroenterologists and Surgeons*. This new edition of *Clinical Pancreatology for Practising Gastroenterologists and Surgeons* is a

result of the collaboration between the world's leading experts in each area of clinical pancreatology, with the aim of facilitating gastroenterologists, surgeons, oncologists, internists, nutritionists, diabetologists, paediatricians, radiologists, pathologists and other specialists in their daily clinical practice. This book is an indispensable update providing leading knowledge in clinical pancreatology.

Liver Transplantation, An Issue of Clinics in Liver Disease, E-Book Roberto J. Firpi 2017-04-12 Cirrhosis from hepatitis C (HCV) is now the most common indication for liver transplant (LT) in the U.S., but between 2004 and 2013, new LT listings for NASH increased by 170%. Unfortunately, fibrosis progression leading to cirrhosis, liver cancer, and liver decompensation continues to occur after transplantation. Once cirrhosis and decompensation are evident, patient survival is poor and repeat LT is considered to improve outcomes. Therefore, the never-ending thirst for new approaches in the management of patients pre- and post-transplant has led to a very promising future in transplantation, though there is much to learn to achieve better patient outcomes. This issue of *Clinics in Liver Disease* addresses the core areas to achieve better patient outcomes, with articles devoted to coagulopathy before liver transplant, challenges in renal failure before LT, LT for acute alcoholic hepatitis, LT in the pregnant patient, bariatric surgery and LT, and MELD Scores in prioritization of LT, to name a few. Readers will place a high value on the current state of liver transplantation in this issue.

Endoscopy in Inflammatory Bowel Disease, An Issue of Gastrointestinal Endoscopy Clinics of North America, Maria T. Abreu 2016-09-16 The field of inflammatory bowel disease has evolved in many ways. The first has been the revolution in medical therapy for the disease. With the advent of biologic therapy, the aspirational goal of therapy has become mucosal healing. These medications have also made it possible to avoid or delay surgery for ulcerative colitis and Crohn's disease. Although non-invasive strategies such as MR or CT enterography or stool-based assays are helpful, they have not been able to replace the prognostic information provided by endoscopy. Simultaneously, the quality and spectrum of tools available to perform endoscopy has widened. High resolution endoscopes are now the norm and are nearly as good as chromoendoscopy for identifying dysplasia in ulcerative colitis patients. Most gastroenterologists also perform dilations but do not generally do this for patients with IBD. Finally, newer devices such as enteroscopes, endoscopic ultrasound, and endomicroscopes are being incorporated into the algorithms to diagnose and treat complications of IBD. This issue highlights all of these advances by the experts in their fields.

Liver Transplantation: Update of Concepts and Practice, An Issue of Clinics in Liver Disease, Kalyan Ram Bhamidimarri 2014-09-08 A number of areas within liver transplant continue to evolve as the field matures. The advent of increasingly effective therapy for HCV will dramatically reduce the burden of recurrent disease within the next few years. HCC has become a well established indication for transplant with an increasing emphasis on adjuvant therapies to reduce the risk of tumor recurrence and potentially expand the acceptable limits of tumor burden amenable to liver transplant. Renal dysfunction is a frequent complication of decompensated liver disease and an important predictor of diminished post-transplant survival. Newer approaches to therapy including telipressin will reduce the impact of renal dysfunction in liver transplant candidates and potentially reduce the need for combined liver/kidney transplant. Increasing attention is being paid to role of comorbidities such as diabetes and hypertension on longterm recipient outcomes. Retransplantation remains a challenge with a variety of models available to predict outcomes. Cardiac disease pretransplant is an area of active investigation with newer entities such as cirrhotic cardiomyopathy a growing concern. These are some of many evolving issues in liver transplant which will be addressed to update our readers and which in turn will enhance the care of patients with liver disease.

Controversies in Hepatology Donald Jensen 2011 The field of hepatology is full of controversies and clinical dilemmas. Each day, gastroenterologists and hepatologists are faced with the challenge of making the best evidence-based decision in challenging cases that do not readily lend themselves to an easy answer, even with today's available medical literature. *Controversies in Hepatology: The Experts Analyze Both Sides* is based on the principle of an academic debate. Dr. Donald Jensen is joined by 50 colleagues who present evidence-based arguments for and against 17 key controversial areas in hepatology. Each point-counterpoint is then followed up by a summarization of key points by a leading expert in that topic area. Some Chapter Topics Include: • Should living donor liver transplantation be considered in adult acute liver failure? • Should hepatitis C be treated in patients with chronic kidney disease prior to kidney transplant? • Resect or observe asymptomatic hepatic adenoma? • Strictly adhere to the "6-month rule" for recent history of alcohol abuse in potential liver transplant candidates? • Autoimmune hepatitis: maintenance therapy for all patients or stop treatment after histologic remission? With concise clinical information to reinforce the point-counterpoint text, *Controversies in Hepatology: The Experts Analyze Both Sides* will become the go-to resource for teaching and perfecting the important skills required to weigh the evidence and arrive at an outcome.
