Pediatric Hematology-Oncology in Countries with Limited Resources Daniela Cristina Stefan 2013-11-18 Typically, manuals of pediatric hematology-oncology are written by specialists from high-income countries, and usually target an audience with a sub-specialist level of training, often assisted by cutting-edge diagnostic and treatment facilities. However, approximately 80% of new cases of cancer in children appear in mid- and low-income countries. Almost invariably, general practitioners or general pediatricians without special training in oncology will look after children with malignancies who enter the health care system in these countries. The diagnostic facilities are usually limited, as are the treatment options. The survival figures in these conditions are somewhere below 20%, while in high-income countries they are in the range of 80% for many childhood cancers. **Pediatric Hematology-Oncology in Countries with Limited Resources** is the only book of its kind to provide specific guidance applicable to limited resource settings and builds up from the foundation of general practitioner or general pediatrician competence. Written and edited by leaders in the field, this manual educates physicians on the essential components of the discipline, filtered through the experience of specialists from developing countries, with immediate applicability in the specific healthcare environment in these countries.

Hazardous Materials Emergencies John R. Cashman 1995-10-26 From the Introduction This book is mostly structured around first-person interviews with nationally and locally recognized experts who have been in hazardous materials response for a number of years. To aid networking, the addresses and telephone numbers of all persons interviewed are listed at the end of each interview. The central narrative theme of the book has been to detail the actual methods, procedures, techniques, tactics, and "lessons learned" of specific hazardous materials response teams (HMRT) drawn from a number of different categories. The object is to have readers find a ready source to provide knowledge of what a teamed, trained, and equipped HMRT uses for methods, tactics, procedures, tools, vehicles, instruments, equipment, strategies, leak/fire/spill control, prevention, remedial actions, decision making, incidents, containment, or hazards. This book answers many questions for emergency responders that they may need to know to stay alive.
