The Newman's Own Organics Guide to a Good Life Nell Newman 2003-03-11
It's fairly obvious that one can't be a 'perfect' environmentalist. But that's okay. Perfection isn't the goal. A good life is. And a good life has as much to do with your intent as with the end result." -from the Introduction
The Newman's Own Organics Guide to a Good Life is the essential book for those of us who can't live in an organic hemp tepee but do care about our quality of life, global warming, clean water, and disappearing resources. Nell Newman shows you how to do what is within easy reach. Along with realistic, practical advice, she shows how and why living a more environmentally conscious life benefits you and your immediate surroundings. In addition to recycling and reusing, the book covers consumer-related steps such as • how buying and eating organic food supports small farms (and tastes better, too) • how you can buy clean power through your regular power company • which long-distance telephone companies offer competitive pricing and service while returning a portion of their profits to environmental and educational organizations • where to buy everything—from pots and pans to pet food—so that you can "vote with your dollar" and feel good about your purchases
Packed with profiles of fascinating—and sometimes zany—people and a heavy dose of sanity, this book is organized according to the way you really live, making it easy to identify what areas of change are viable for you. A resource directory of publications, retailers, groups, and associations is included in the back of the book.

Certain careers are expected to gain importance within the early decades of the twenty-first century. In general, the number of job opportunities for mechanics is expected to increase slower than the average for all occupations. However, job opportunities are expected to be very good for mechanics that complete a training program and receive special certification to work on alternative fuel vehicles. There are already millions of alternative fuel vehicles driving on the roads today. As this number grows, the world will need more mechanics who know how to work on this new generation of "green" vehicles. Could you be one of them?
