

# Life History Evolution And Sociology The Biological Backstory Of Coming Apart The State Of White America 1960

Getting the books **Life History Evolution And Sociology The Biological Backstory Of Coming Apart The State Of White America 1960** now is not type of challenging means. You could not lonely going next book collection or library or borrowing from your friends to open them. This is an agreed simple means to specifically get lead by on-line. This online proclamation **Life History Evolution And Sociology The Biological Backstory Of Coming Apart The State Of White America 1960** can be one of the options to accompany you in the manner of having extra time.

It will not waste your time. consent me, the e-book will categorically manner you other concern to read. Just invest tiny time to admission this on-line statement **Life History Evolution And Sociology The Biological Backstory Of Coming Apart The State Of White America 1960** as without difficulty as evaluation them wherever you are now.

*Sociobiology and Conflict* V. Falger 2012-12-06 1. 1 THE STUDY OF CONFLICT Polemos Panton Pater Heraclitus Conflict on all levels of organic existence is pervasive, persistent, ubiquitous. Conflict is the universal experience of all life forms. Organisms are bound in multiple conflict-configurations and -coalitions, which have their own dynamic and their own logic. This does not mean, however, that the more paroxysmal forms of conflict behaviour, naked violence and destruction, are also universal. Conflict and cooperation are always intertwined. Conflicts do, however, have a propensity to gravitate towards violence. There is, as Pettman (1975) pointed out, no accepted or agreed list of the social units by which conflicts might be classified. To talk of conflict in intra personal, inter-personal, familial, group, class, ethnic, religious, intra-state or inter-state terms is to assume, perhaps erroneously, that 'each kind of social unit, having its own range of size, structure, and institutions, will also have its own modes of interaction and thus its own patterns of conflict with other social units' (Fink, 1968) like and unlike itself. Such an assumption merits scrutiny on its own, since, despite the plausibility of some sort of analytical link between the parties to a conflict and the nature of the confrontation that ensues, the link should be demonstrated and not allowed to stand by assertion alone. This volume is devoted to one type of analysis of conflict, the socio biological one.

**Life History Evolution** Steven C. Hertler 2018-07-04 The social sciences share a mission to shed light on human nature and society. However, there is no widely accepted meta-theory; no foundation from which variables can be linked, causally sequenced, or ultimately explained. This book advances "life history evolution" as the missing meta-theory for the social sciences. Originally a biological theory for the variation between species, research on life history evolution now encompasses psychological and sociological variation within the human species that has long been the stock and trade of social scientific study. The eighteen chapters of this book review six disciplines, eighteen authors, and eighty-two volumes published between 1734 and 2015—re-reading the texts in the light of life history evolution.

**Intergenerational Family Relations** Antti O. Tanskanen 2018-08-06 This book offers a synthesis of social science and evolutionary approaches to the study of intergenerational relations, using biological, psychological and sociological factors to develop a single framework for understanding why kin help one another across generations. With attention to both biological family relations as well as in-law and step-relations, it provides an overview of existing studies centred on intergenerational relations – particularly grandparenting – that incorporate social science and evolutionary family theories. This evolutionary social science approach to intergenerational family relations goes well beyond the traditional nature versus nurture distinction. As such, it will appeal to scholars across a range of disciplines with interests in relations of kinship, the lifecourse and the sociology of the family.

**The Evolution of Reason** William S. Cooper 2001-01-29 The formal systems of logic have ordinarily been regarded as independent of biology, but recent developments in evolutionary theory suggest that biology and logic may be intimately interrelated. In this book, William S. Cooper outlines a theory of rationality in which logical law emerges as an intrinsic aspect of evolutionary biology. He examines the connections between logic and evolutionary biology and illustrates how logical rules are derived directly from evolutionary principles, and therefore, have no independent status of their own. This biological perspective on logic, though at present unorthodox, could change traditional ideas about the reasoning process.

**The World of Biology and Politics** Steven A. Peterson 2013-10-10 This volume describes (a) the present academic and institutional status of Biopolitics and (b) the wide range of research areas that have emerged within the field.

**Handbook of Population** Dudley L. Poston 2006-08-10 This comprehensive handbook provides an overview and update of the issues, theories, processes, and applications of the social science of population studies. The volume's 30 chapters cover the full range of conceptual, empirical, disciplinary, and applied approaches to the study of demographic phenomena. This book is the first effort to assess the entire field since Hauser and Duncan's 1959 classic, *The Study of Population*. The chapter authors are among the leading contributors to demographic scholarship over the past four decades. They represent a variety of disciplines and theoretical perspectives as well as interests in both basic and applied research.

**Sociological Abstracts** 2003 CSA Sociological Abstracts abstracts and indexes the international literature in sociology and related disciplines in the social and behavioral sciences. The database provides abstracts of journal articles and citations to book reviews drawn from over 1,800+ serials publications, and also provides abstracts of books, book chapters, dissertations, and conference papers.

**The Evolution of Parental Care** Mathias Kölliker 2012-08-09 Parental care includes a wide variety of traits that enhance offspring development and survival. It is taxonomically widespread and is central to the maintenance of biodiversity through its close association with other phenomena such as sexual selection, life-history evolution, sex allocation, sociality, cooperation and conflict, growth and development, genetic architecture, and phenotypic plasticity. This novel book provides a fresh perspective on the study of the evolution of parental care based on contributions from some of the top researchers in the field. It provides evidence that the dynamic nature of family interactions, and particularly the potential for co-evolution among family members, has contributed to the great diversity of forms of parental care and life-histories across as well as within taxa. The Evolution of Parental Care aims to stimulate students and researchers alike to pursue exciting new directions in this fascinating and important area of behavioural and evolutionary biology. It will be of relevance and use to those working in the fields of animal behaviour, ecology, evolution, and genetics, as well as related disciplines such as psychology and sociology.

**Biosociology** Anthony Walsh 2017-09-08 Anthony Walsh bridges the divide separating sociology from biology—a divide created in the late nineteenth century when sociology emerged from the fields of social theory and philosophy. Walsh focuses on the viewpoint held by former American Sociological Association president Douglas Massey: sociologists have allowed the fact that we are social beings to obscure the biological foundations upon which our behaviour ultimately rests. Walsh argues that sociology has nothing to fear and a wealth of riches to gain if it pays attention to the theories, concepts, and methodologies of the biological sciences. Both study the same phenomena. Beginning with an examination of the reasons why we need a biosocial approach, Walsh explores sociology's traditional "taboo" concepts (reductionism, essentialism, etc.) and how those concepts are viewed in the natural sciences. Throughout the work, the author introduces relevant concepts from genetics and the neurosciences, using examples that will appeal to all sociologists. Later chapters apply his introductory arguments to traditional substantive sociological issues such as culture, crime, gender, socialization, social class, and the family. This book will be essential to all sociologists, evolutionary biologists, and scholars interested in the history of this important divide between the fields and where it currently stands.

**Demography - Volume II** Zeng Yi 2010-11-30 Zeng Yi is a Professor at the Center for the Study of Aging and Human Development and Geriatric Division / Dept of Medicine of Medical School, and Institute of Population Research and Dept. of Sociology, Duke University. He is also a Professor at the China Center for Economic Research, National School of Development at Peking University in China, and Distinguished Research Scholar of the Max Planck Institute for Demographic Research (MPIDR) in Germany. He received his doctoral degree from Brussels Free University in May 1986, and conducted post-doctoral study at Princeton University in 1986-87. Up to Feb. 2008, he has had 81 professional articles written in English published in academic journals or as book chapters in the United States and Europe; among them, 51 articles were published in anonymous, peer-reviewed academic journals. He has had 85 professional articles written in Chinese and published in China; among them, 55 articles were published in national top Chinese academic journals. He has published sixteen books, including five research books (as first author), such as "Family Dynamics in China," published by the University of Wisconsin Press; one textbook on demographic methods (as the sole author); two volumes of demographic software and user's manuals (as the first author) on family status life table analysis; six edited books (four as the chief editor, and two as the second editor), such as the 2005 and 2008 books published by Springer for which he served as the chief editor. Six of Zeng Yi's published books were written in English, one was written in both Chinese and English, and the remainders were written in Chinese. Zeng Yi has been awarded more than ten national and international academic prizes, such as the Dorothy Thomas Prize of the Population Association of America, the Harold D. Lasswell Prize in Policy Science awarded by the international journal Policy Sciences and Kluwer Academic Publishers, the second-class prize for advancement of science and technology awarded by the State Sciences and Technology Commission of China, the first-class prize for advancement of science and technology awarded by the State Education Commission, and the highest

academic honor of Peking University: "Prize for Outstanding Contributions in Sciences." According to the search report, up to March 1, 2008, the internationally most important literature sources SSCI (Social Science Citation Index) and SCI (Science Citation Index), published in the U.S., indicate that Zeng Yi's articles and books have been cited in 755 journal articles by authors other than Zeng Yi. Among them, 440 citations refer to the work of Zeng Yi as the first author; 315 citations refer to the work of Zeng Yi as a co-author. Zeng Yi is one of the authors of "High Impact Papers" worldwide in the period of 1981 -1998, as announced by International Scientific Institute (ISI) in September, 2000.

**Evolution in Age-Structured Populations** Brian Charlesworth 1994-06-30 The populations of many species of animals and plants are age-structured, i.e. the individuals present at any one time were born over a range of different times, and their fertility and survival depend on age. The properties of such populations are important for interpreting experiments and observations on the genetics of populations for animal and plant breeding, and for understanding the evolution of features of life-histories such as senescence and time of reproduction. In this new edition Brian Charlesworth provides a comprehensive review of the basic mathematical theory of the demography and genetics of age-structured populations. The mathematical level of the book is such that it will be accessible to anyone with a knowledge of basic calculus and linear algebra.

**Handbook of the Life Course** Jeylan T. Mortimer 2007-12-14 This comprehensive handbook provides an overview of key theoretical perspectives, concepts, and methodological approaches that, while applied to diverse phenomena, are united in their general approach to the study of lives across age phases. In surveying the wide terrain of life course studies with dual emphases on theory and empirical research, this important reference work presents probative concepts and methods and identifies promising avenues for future research.

**The Triumph of Sociobiology** John Alcock 2001-06-28 In *The Triumph of Sociobiology*, John Alcock reviews the controversy that has surrounded evolutionary studies of human social behavior following the 1975 publication of E.O. Wilson's classic, *Sociobiology, The New Synthesis*. Denounced vehemently as an "ideology" that has justified social evils and inequalities, sociobiology has survived the assault. Twenty-five years after the field was named by Wilson, the approach he championed has successfully demonstrated its value in the study of animal behavior, including the behavior of our own species. Yet, misconceptions remain--to our disadvantage. In this straight-forward, objective approach to the sociobiology debate, noted animal behaviorist John Alcock illuminates how sociobiologists study behavior in all species. He confronts the chief scientific and ideological objections head on, with a compelling analysis of case histories that involve such topics as sexual jealousy, beauty, gender difference, parent-offspring relations, and rape. In so doing, he shows that sociobiology provides the most satisfactory scientific analysis of social behavior available today. Alcock challenges the notion that sociobiology depends on genetic determinism while showing the shortcoming of competing approaches that rely on cultural or environmental determinism. He also presents the practical applications of sociobiology and the progress sociobiological research has made in the search for a more complete understanding of human activities. His reminder that "natural" behavior is not "moral" behavior should quiet opponents fearing misapplication of evolutionary theory to our species. The key misconceptions about this evolutionary field are dissected one by one as the author shows why sociobiologists have had so much success in explaining the puzzling and fascinating social behavior of nonhuman animals and humans alike.

**Evolutionary Aesthetics of Human Ethics in Hardy's Tragic Narratives** R'za Öztürk 2011-05-25 Treatment of Hardy's tragic narratives under the objective lens of evolutionary literary theory has led to three basic findings: First, within the scope of the analysis of the five major tragic narratives, representation of Hardy's evolutionary aesthetics of human ethics, in terms of altruistic sympathy and compassion, shows that adapted parental investment in children indicates the reason why women submit to pain and suffering more than the men do. The costly investment of women in maternal behaviour leads to submission in many cases, but in return they gain better fitness for survival and reproduction than men. This is implicitly highlighted as a force of superiority in the tragedies studied, as the male characters often invest in heroic deeds over their children. Second, that which has for many years been identified as pessimism in Hardy's tragic narratives is in fact a surface cognitive layer, under which is an implicit teaching of evolutionary aesthetics of human ethics, which guides to a true fitness of human life. Third, sympathy and particularly compassion are not only human emotions but also adapted cognitive virtues that centre on ethical teaching. Thus, an integrated model of science and humanities for art and literary analysis is required to address not only those of English language and literature departments, but also those aligned to the idea of integrating the two methods. A scientific and objective view of human life is in opposition to postmodern and structuralist approaches, which have generally been considered as the centre of interest during the latter half of the 20th century.

**Human Evolution, Reproduction, and Morality** Lewis Petrinovich 1995-03-31 Explores the moral and ethical debates surrounding evolution, abortion, reproductive technologies, and fetal tissue research. Presents guidelines for argument, examines the naturalistic and slippery slope fallacies, discusses evolutionary mechanisms and moral philosophy, and details arguments and concepts regarding the critical nature of personhood. The author believes that the same principles should apply to issues regarding abortion and the death of humans and keeping, killing, and consuming nonhuman animals. Annotation copyright by Book News, Inc., Portland, OR

**Human Senescence** Douglas E. Crews 2003-12-11 Much research on the biology of senescence is on cell-lines, nematodes or fruit flies, that are only of peripheral relevance to the problems encountered in humans. *Human Senescence* is a text which reviews the evolutionary biology of human senescence and life span, and the evolutionarily recent development of late-life survival. It examines how human patterns of and variability in growth and development have altered later life survival probabilities and competencies, and how survival during mid-life contributes to senescent dysfunction and alteration. Discussing possibilities of further extending human life span, it gives a better understanding of how humans came to senesce as slowly as we do over our lifespan. Bringing together gerontological, anthropological and biocultural research, it explores human variation in chronic disease, senescence and life span as outcomes of early life adaptation and the success of humankind's sociocultural evolution. It is a benchmark publication for all interested in how and why we age.

**Library of Congress Subject Headings** Library of Congress 1991

**Darwinian Sociocultural Evolution** Marion Blute 2010-01-14 Addresses today's major dilemmas in social scientific theory from the modern Darwinian sociocultural evolutionary approach.

**Political Biology** M. Meloni 2016-05-25 This book explores the socio-political implications of human heredity from the second half of the nineteenth century to the present postgenomic moment. It addresses three main phases in the politicization of heredity: the peak of radical eugenics (1900-1945), characterized by an aggressive ethos of supporting the transformation of human society via biological knowledge; the repositioning, after 1945, of biological thinking into a liberal-democratic, human rights framework; and the present postgenomic crisis in which the genome can no longer be understood as insulated from environmental signals. In *Political Biology*, Maurizio Meloni argues that thanks to the ascendancy of epigenetics we may be witnessing a return to soft heredity - the idea that these signals can cause changes in biology that are themselves transferable to succeeding generations. This book will be of great interest to scholars across science and technology studies, the philosophy and history of science, and political and social theory.

**Theoretical Approaches in Bioarchaeology** Colleen M. Cheverko 2020-08-21 *Theoretical Approaches in Bioarchaeology* emphasizes how several different theoretical perspectives can be used to reconstruct the biocultural experiences of humans in the past. Over the past few decades, bioarchaeology has been transformed through methodological revisions, technological advances, and the inclusion of external theoretical frameworks from the social and natural sciences. These interdisciplinary perspectives became the backbone of bioarchaeology and strengthened the discipline's ability to address questions about past biological and social dynamics. Consequently, how, why, and when to apply external theory to studies of past populations are central and timely questions tied to future developments of the discipline. This book facilitates ongoing dialogues about theoretical applications within the field and interdisciplinary connections between bioarchaeology, biological anthropology, and other disciplines. Each chapter highlights how a theoretical framework originating from a social or natural science connects to past and future bioarchaeological research. For scholars and archaeologists interested in the theoretical applications of bioarchaeology, this book will be an excellent resource.

**The Evolutionary Biology of Human Female Sexuality** Randy Thornhill 2008-09-25 Research conducted in the last fifteen years has placed in question many of the traditional conclusions scholars have formed about human female sexuality. Though conventional wisdom asserts that women's estrus has been evolutionarily lost, Randy Thornhill and Steven W. Gangestad assert that it is present, though concealed. Women, they propose, therefore exhibit two sexualities each ovulatory cycle--estrus and sexuality outside of the estrous phase, extended sexuality--that possess distinct functions. Synthesizing research in behavioral evolution and comparative biology, the authors provide a new theoretical framework for understanding the evolution of human female sexuality, one that is rooted in female sexuality and phylogeny across all vertebrate animals.

**Old-Earth or Evolutionary Creation?** Kenneth Keathley 2017-07-18 Christians confess that God created the heavens and the earth. But just how did he do it, and does the Bible give us a scientifically accurate account? Listen in as representatives from Reasons to Believe (old-earth creation) and BioLogos (evolutionary creation) engage in charitable dialogue on questions of creation and evolution.

**Handbook of Biology and Politics** Steven A. Peterson 2017-05-26 The study of biology and politics (or biopolitics) has gained considerable currency in recent years, as articles on the subject have appeared in mainstream journals and books on the subject have been well received. The literature has increased greatly since the 1960s and 1970s, when this specialization first made an appearance. This volume assesses the contributions of biology to political science. Chapters focus on general biological approaches to politics, biopolitical contributions to mainstream areas within political science, and linkages between biology and public policy. The volume provides readers with a comprehensive introduction to the subject.

**Philosophy of Anthropology and Sociology** 2011-08-12 This volume concerns philosophical issues that arise from the practice of anthropology and sociology. The essays cover a wide range of issues, including traditional questions in the philosophy of social science as well as those specific to these disciplines. Authors attend to the historical development of the current debates and set the stage for future work. · Comprehensive survey of philosophical issues in anthropology and sociology · Historical discussion of important debates · Applications to current research in anthropology and sociology

**The Biology of Plethodontid Salamanders** Richard C. Bruce 2012-12-06 This volume offers a state-of-the-art overview of plethodontid salamanders. Readers will find the best

current understanding of many aspects of the evolution, systematics, development, morphology, life history, ecology, and field methodology of these animals.

**Aboriginal Children, History and Health** John Boulton 2016-04-28 This volume traces the complex reasons behind the disturbing discrepancy between the health and well-being of children in mainstream Australia and those in remote Indigenous communities. Invaluably informed by Boulton's close working knowledge of Aboriginal communities, the book addresses growth faltering as a crisis of Aboriginal parenting and a continued problem for the Australian nation. The high rate and root causes of ill-health amongst Aboriginal children are explored through a unique synthesis of historical, anthropological, biological and medical analyses. Through this fresh approach, which includes the insights of specialists from a range of disciplines, *Aboriginal Children, History and Health* provides a thoughtful and innovative framework for considering Indigenous health.

**Life History Evolution and Sociology** Steven C. Hentler 2017-01-23 This book supplies the evolutionary and genetic framework that Charles Murray, towards the end of *Coming Apart: The State of White America 1960-2010*, predicts will one day explain revolutionary change in American society. Murray's *Coming Apart* documents 50 years of changed college admissions, government incentives, mating and migration patterns that have wrought national divisions across indexes of marriage, industriousness, honesty, and religiosity. The framework discussed is life history evolution, a sub-discipline within evolutionary biology singly capable of explaining why violent crime, property crime, low marriage rates, father absence, early birth, low educational achievement, low income, poverty, lack of religiosity and reduced achievement striving will reliably co-occur as part of a complex. This complex augments facultatively, developmentally and evolutionarily in response to unpredictable and uncontrollable sources of mortality. The uncertain tenure of life wrought by unpredictable and uncontrollable mortality selects for a present-oriented use of bioenergetics resources recognizable as the social ills of Fishtown, Murray's archetypal working class community. In turn, the thirty years of life history literature herein reviewed confirms the biological logic of elite intermarriage and sequestration. The source of life history variation, policy implications, and demography are discussed.

**Mathematical Models in Population Biology and Epidemiology** Fred Brauer 2011-11-09 The goal of this book is to search for a balance between simple and analyzable models and unsolvable models which are capable of addressing important questions on population biology. Part I focusses on single species simple models including those which have been used to predict the growth of human and animal population in the past. Single population models are, in some sense, the building blocks of more realistic models -- the subject of Part II. Their role is fundamental to the study of ecological and demographic processes including the role of population structure and spatial heterogeneity -- the subject of Part III. This book, which will include both examples and exercises, is of use to practitioners, graduate students, and scientists working in the field.

**Evolutionary Systems and Society** Vilmos Csányi 1989 This work is a bold new effort to embrace all aspects of life—molecular, cellular, behavioral, and cultural—within the formulation of a general theory of evolution that extends classical Darwinian theory to include human society.

**Biology and Criminology** Anthony Walsh 2010-03-17 Numerous criminologists have noted their dissatisfaction with the state of criminology. The need for a new paradigm for the 21st century is clear. However, many distrust biology as a factor in studies of criminal behavior, whether because of limited exposure or because the orientation of criminology in general has a propensity to see it as racist, classist, or at least illiberal. This innovative new book by noted criminologist Anthony Walsh dispels such fears, examining how information from the biological sciences strengthens criminology work and both complements and improves upon traditional theories of criminal behavior. With its reasoned case for biological science as a fundamental tool of the criminologist, Walsh's groundbreaking work will be required reading for all students and faculty within the field of criminology.

**New Directions in the Sociology of Aging** National Research Council 2013-12-26 The aging of the population of the United States is occurring at a time of major economic and social changes. These economic changes include consideration of increases in the age of eligibility for Social Security and Medicare and possible changes in benefit levels. Furthermore, changes in the social context in which older individuals and families function may well affect the nature of key social relationships and institutions that define the environment for older persons. Sociology offers a knowledge base, a number of useful analytic approaches and tools, and unique theoretical perspectives that can facilitate understanding of these demographic, economic, and social changes and, to the extent possible, their causes, consequences and implications. *New Directions in the Sociology of Aging* evaluates the recent contributions of social demography, social epidemiology and sociology to the study of aging and identifies promising new research directions in these sub-fields. Included in this study are nine papers prepared by experts in sociology, demography, social genomics, public health, and other fields, that highlight the broad array of tools and perspectives that can provide the basis for further advancing the understanding of aging processes in ways that can inform policy. This report discusses the role of sociology in what is a wide-ranging and diverse field of study; a proposed three-dimensional conceptual model for studying social processes in aging over the life cycle; a review of existing databases, data needs and opportunities, primarily in the area of measurement of interhousehold and intergenerational transmission of resources, biomarkers and biosocial interactions; and a summary of roadblocks and bridges to transdisciplinary research that will affect the future directions of the field of sociology of aging.

**A Companion to Dental Anthropology** Joel D. Irish 2020-12-22 *Companion to Dental Anthropology* presents a collection of original readings addressing all aspects and sub-disciplines of the field of dental anthropology—from its origins and evolution through to the latest scientific research. Represents the most comprehensive coverage of all sub-disciplines of dental anthropology available today Features individual chapters written by experts in their specific area of dental research Includes authors who also present results from their research through case studies or voiced opinions about their work Offers extensive coverage of topics relating to dental evolution, morphometric variation, and pathology

**Evolutionary and Interpretive Archaeologies** Ethan Cochrane 2011-06 This collection of original articles compares various key archaeological topics—agency, violence, social groups, diffusion—from evolutionary and interpretive perspectives. These two strands represent the major current theoretical poles in the discipline. By comparing and contrasting the insights they provide into major archaeological themes, this volume demonstrates the importance of theoretical frameworks in archaeological interpretations. Chapter authors discuss relevant Darwinian or interpretive theory with short archaeological and anthropological case studies to illustrate the substantive conclusions produced. The book will advance debate and contribute to a better understanding of the goals and research strategies that comprise these distinct research traditions.

**Conceptual Change in Biology** Alan C. Love 2014-11-07 This volume explores questions about conceptual change from both scientific and philosophical viewpoints by analyzing the recent history of evolutionary developmental biology. It features revised papers that originated from the workshop "Conceptual Change in Biological Science: Evolutionary Developmental Biology, 1981-2011" held at the Max Planck Institute for the History of Science in Berlin in July 2010. The Preface has been written by Ron Amundson. In these papers, philosophers and biologists compare and contrast key concepts in evolutionary developmental biology and their development since the original, seminal Dahle conference on evolution and development held in Berlin in 1981. Many of the original scientific participants from the 1981 conference are also contributors to this new volume and, in conjunction with other expert biologists and philosophers specializing on these topics, provide an authoritative, comprehensive view on the subject. Taken together, the papers supply novel perspectives on how and why the conceptual landscape has shifted and stabilized in particular ways, yielding insights into the dynamic epistemic changes that have occurred over the past three decades. This volume will appeal to philosophers of biology studying conceptual change, evolutionary developmental biologists focused on comprehending the genesis of their field and evaluating its future directions, and historians of biology examining this period when the intersection of evolution and development rose again to prominence in biological science.

**Handbook on Evolution and Society** Alexandra Maryanski 2015-11-17 "Handbook on Evolution and Society" brings together original chapters by prominent scholars who have been instrumental in the revival of evolutionary theorizing and research in the social sciences over the last twenty-five years. Previously unpublished essays provide up-to-date, critical surveys of recent research and key debates. The contributors discuss early challenges posed by sociobiology, the rise of evolutionary psychology, the more conflicted response of evolutionary sociology to sociobiology, and evolutionary psychology. Chapters address the application and limitations of Darwinian ideas in the social sciences. Prominent authors come from a variety of disciplines in ecology, biology, primatology, psychology, sociology, and the humanities. The most comprehensive resource available, this vital collection demonstrates to scholars and students the new ways in which evolutionary approaches, ultimately derived from biology, are influencing the diverse social sciences and humanities.

**The Concise Encyclopedia of Sociology** George Ritzer 2011-01-25 This concise encyclopedia is the most complete international survey of sociology ever created in one volume. Contains over 800 entries from the whole breadth of the discipline Distilled from the highly regarded Blackwell Encyclopedia of Sociology, with entries completely revised and updated to provide succinct and up-to-date coverage of the fundamental topics Global in scope, both in terms of topics and contributors Each entry includes references and suggestions for further reading Cross-referencing allows easy movement around the volume

**The Oxford Handbook of Evolution, Biology, and Society** Rosemary Lynn Hopcroft 2018 This book contains an overview of research on the interaction of biological and sociological processes. Issues explored include: the origins of social solidarity; religious beliefs; sex differences; gender inequality; human happiness; social stratification and inequality; identity, status, and other group processes; race, ethnicity, and discrimination; fertility and family processes; crime and deviance; cultural and social change.

**Play Among Books** Miro Roman 2021-12-06 How does coding change the way we think about architecture? This question opens up an important research perspective. In this book, Miro Roman and his AI Alice\_ch3n81 develop a playful scenario in which they propose coding as the new literacy of information. They convey knowledge in the form of a project model that links the fields of architecture and information through two interwoven narrative strands in an "infinite flow" of real books. Focusing on the intersection of information technology and architectural formulation, the authors create an evolving intellectual reflection on digital architecture and computer science.

**Handbook of Neurosociology** David D. Franks 2012-07-09 Until recently, a handbook on neurosociology would have been viewed with skepticism by sociologists, who have long been protective of their disciplinary domain against perceived encroachment by biology. But a number of developments in the last decade or so have made sociologists more receptive to biological factors in sociology and social psychology. Much of this has been encouraged by the coeditors of this volume, David Franks and Jonathan Turner. This new

interest has been increased by the explosion of research in neuroscience on brain functioning and brain-environment interaction (via new MRI technologies), with implications for social and psychological functioning. This handbook emphasizes the integration of perspectives within sociology as well as between fields in social neuroscience. For example, Franks represents a social constructionist position following from G.H. Mead's voluntaristic theory of the act while Turner is more social structural and positivistic. Furthermore, this handbook not only contains contributions from sociologists, but leading figures from the psychological perspective of social neuroscience.

**The Oxford Handbook of Developmental Psychology, Vol. 1** Philip David Zelazo 2013-03-21 This handbook provides a comprehensive survey of what is now known about psychological development, from birth to biological maturity, and it highlights how cultural, social, cognitive, neural, and molecular processes work together to yield human behavior and changes in human behavior.
