Arthur E. Haas - The Hidden Pioneer of Quantum Mechanics Michael Wiescher 2021-09-23 The book highlights the personal and scientific struggles of Arthur Erich Haas (1884-1941), an Austrian Physicist from a wealthy Jewish middle-class family, whose remarkable accomplishments in a politically hostile but scientifically rewarding environment deserve greater recognition. Haas was a fellow student of both Lise Meitner and Erwin Schrödinger and was also one of the last doctoral students of Ludwig Boltzmann. Following Boltzmann's suicide, Haas was forced to submit a more independent doctoral thesis in which he postulated new approaches in early quantum theory, actually introducing the idea of the Bohr radius before Niels Bohr. It is the lost story of a trailblazer in the fields of quantum mechanics and cosmology, a herald of nuclear energy and applications of modern science. This biography of Haas is based on new and previously unpublished family records and archived material from the Vienna Academy of Science and the University of Notre Dame, which the author has collected over many years. From his analysis of the letters, documents, and photos that rested for nearly a century in family attics and academic archives, Michael Wiescher provides a unique and detailed insight into the life of a gifted Jewish physicist during the first half of the twentieth century. It also sheds light on the scientific developments and thinking of the time. It appeals not only to historians and physicists, but also general readers. All appreciate the record of Haas' interactions with many of the key figures who helped to found modern physics.

Human Geography Mark Boyle 2021-03-29 Revised, Extended, and Extensively Updated Text Uses Historical Geographical and Thematic Approach to Provide Undergraduates with a Firm Foundation in Human Geography Drawing on nearly three decades of instructional experience and a wealth of testing pedagogical innovations with students, Mark Boyle has revised and expanded this authoritative and comprehensive introduction to Human Geography. As with the First Edition, Boyle follows the premise that "history makes geography whilst geography makes history," and that the key to studying the principal demographic, social, political, economic, cultural and environmental processes in any region in the world today is to look at how that region has been impacted by, and in turn has impacted, the story of the rise, reign, and decline of the West. Moreover he argues that Human Geography itself is best understood as both an intellectual endeavour and a historical, political, and institutional project. Informed by recent developments in post-colonial scholarship, the book covers key concepts, seminal thinkers, and influential texts in the field. Although designed for the beginner student, Boyle does not shy away from ideas and debates often avoided in introductory texts, clearly communicating theory without condescension. In addition, he places human geography in its larger academic context, discussing the influences on the field from related subjects. Notable features in the Second Edition include: Extensive revision and updating of coverage of key ideas, developments, debates and case studies New chapter on uneven geographical development at different scales and development theory and practice Dedicated coverage of Covid-19s geographies New learning resources (figures, tables, plates, maps, Deep Dive boxes, etc.) throughout the text, plus learning objectives, essay questions, checklists summarizing key ideas, and guidance for further reading Updated and expanded companion website with MP4 and MP3 chapter-by-chapter lectures and PowerPoint slides for each chapter, new multiple-choice exam paper and additional essay-style exam questions, and a wide range of student tutorial exercises Human Geography: An Essential Introduction, Second Edition is an excellent foundational text for undergraduate courses in human geography, globalization, Western civilization, historiographies of intellectual thought, the grand public problems confronting humanity in the twenty first century, and other wider social science courses.
