Modelling in Natural Sciences Tibor Müller 2003-02-14 This book defines the wide application of the art of modelling. The main emphasis is on the imaging of dynamic processes which are analysed and subdivided into their atomic constituents by means of systems analysis. The cyclic structure and the stages of models' set-up are explained. The evaluation of a model's quality is regarded as a stochastic process. The aspects of grade used in different fields of sciences are brought into perspective. Thus, a quantitative concept of validity on the basis of conditional degrees of rational belief can be developed.
Appraising Lakatos György Kampis 2002-03-31 This volume presents a critical re-evaluation of the ideas of Imre Lakatos, a leader in the shaping of what is called the new philosophy of science. The 17 contributions (the result of a joint venture between the Institute Vienna Circle and the Institute for

History and Philosophy of Science of Eotvos U, Budapest) address his main theme of locating rationality within the scientific process, as well as his philosophy of mathematics, which emphasizes heuristics and mathematical practice over logical justification. They also include discussion of his personal life and politics, and contain a part of his Debrecen Ph.D. thesis as well as a bibliography of his Hungarian writings. Edited by Kampis (Eotvos U.), Ladislav Kvasz (Comenius U.) and Michael Stoltzner (Institute Vienna Circle). Annotation copyrighted by Book News, Inc., Portland, OR.
