Apache Struts remains the most popular framework for building Java-driven web sites, despite continued challenges from competitive frameworks and APIs like JavaServer Faces (JSF), Wicket, Grails, and more. Java Frameworks and Components Michael Nash 2003-06-16 The book is a guide for programmers creating applications for use on the internet. It gives them what they need to evaluate and choose the appropriate framework and component tools. It provides the knowledge required to understand these technologies and to assist them in choosing the right tools for their job. It is written in plain English in a practical, hands-on approach as opposed to a highly technical, theoretical treatise on the subject. These technologies are new and very valuable but not widely adopted yet due to being perceived as very complex. This book dispels the mystery.
