Haemophilia in Aotearoa New Zealand Julie Park 2019-01-24
Haemophilia in Aotearoa New Zealand provides a richly detailed analysis of the experience of the bleeding disorder of haemophilia based on longterm ethnographic research. The chapters consider experiences of diagnosis; how parents, children, and adults care and integrate medical routines into family life; the creation of a gendered haemophilia; the use and ethical dilemmas of new technologies for treatment, testing and reproduction; and how individuals and the haemophilia community experienced the infected blood tragedy and its aftermath, which included extended and ultimately successful political struggles with the neoliberalising state. The authors reveal a complex interplay of cultural values and present a close-up view of the effects of health system reforms on lives and communities. While the book focuses on the local biology of haemophilia in Aotearoa New Zealand, the analysis allows for comparison with haemophilia elsewhere and with other chronic and genetic conditions.

Diagnostic Imaging of Musculoskeletal Diseases Akbar Bonakdarpour 2010-06-09 We dedicate this text to Drs. Ernest E. Aegerter, a

pathologist, and John A. Kirkpatrick Jr., a radiologist. They were among the principal founders of the field of skeletal pathology and radiology. During their time, their residents and colleagues knew them as great educators with a dedication and a passion for their work. Their textbook, *Orthopedic Diseases*, published initially in 1958 was among the first interdisciplinary works devoted to this field. Dr. Aegerter and Dr. Kirkpatrick illuminated many aspects of the field of radiology. Today, with the advent of new technologies, this field has grown to include not only diseases that affect the skeleton but also those that affect muscles, ligaments, tendons, and also the cartilaginous structures within joints. With this text we intend to carry on Dr. Aegerter and Dr. Kirkpatrick's tradition. We have recruited only well-known musculoskeletal radiologists and pathologists to participate in the writing of this book. Each author has been carefully selected for his expertise on the topic about which he's been asked to contribute. Each author is known as an experienced and seasoned teacher. Each author has made a mark on the field.

33rd Hemophilia Symposium I. Scharer 2012-02-02 This book contains the contributions to the 33rd Hemophilia Symposium, Hamburg 2002. The main topics are epidemiology, new findings and possibilities in the therapy of antibodies; therapeutic exercise and sport. The volume is rounded off by numerous free papers and posters on hemophilia and hemorrhagic disorders, thrombophilic disorders and associated topics.

35th Hemophilia Symposium Hamburg 2004 Inge Scharer 2006-05-24 Motion analysis as introduced 2 years ago on a national basis effectively identifies individual functional disorders and provides a means for describing them on the basis of a score. Individual therapy planning is possible. More treatment tends to produce better function scores and thus helps to lower the strain on the joint. Further study is required in order to determine whether this reduces the incidence of bleeding. Knee function is age-dependent. Height, weight and sporting activity seem to be influencing factors. Demeanor, pain, fatigue and parental motivation do not seem to have an impact. The roll-and-glide pattern is not age-dependent and probably shows functional abnormalities of the knee. Functional benchmarking of the sites is possible but difficult because each site selects the children differently. Age differences also render an overall assessment difficult. Some sites performed negative screening so as to only test children with more severe problems, while other sites performed no such selection. In other sites, the only children to show up for motion analysis were those with well informed parents and who are always involved in all the other activities on offer too.

Health and Healing in Comparative Perspective Elizabeth Dixon Whitaker 2006 This reader provides both fascinating comparative ethnographic detail and a theoretical framework for organizing and interpreting information about health. While there are many health-related fields represented in this book, its core discipline is medical anthropology and its main focus is the comparative approach. Cross-cultural comparison gives anthropological analysis breadth while the evolutionary time scale gives it depth. These two features

have always been fundamental to anthropology and continue to distinguish it among the social sciences. A third feature is the in-depth knowledge of culture produced by anthropological methods such as participant-observation, involving long-term presence in and research among a study population. The first part of the book explores healing systems in different cultures; the second and third provide a strong grounding in evolutionary and culture-oriented analysis, making clear the connections between biology and culture as they affect health; the final part emphasizes case studies that apply the theoretical principles presented earlier to particular health topics. For medical anthropology, medical sociology, public health, nursing, and medical training professionals.

Interdisciplinary Pediatric Palliative Care Joanne Wolfe 2022 "We hope that the lives of all children will be filled with possibility, with open horizons and rainbows into the future. Children with serious illnesses, their families, and those who care for them, confront the realization that "not everything is possible," that despite dramatic scientific and medical advances, the lifespan of some children will be shortened. This threat of premature loss heightens the sense of time for children and families alike, and challenges clinicians to create new pathways of hope for them"--
