*Technological Innovation and International Competitiveness for Business Growth* João J. M. Ferreira 2020-10-22 This book explores how companies combine technological innovation and competitive actions that create new opportunities for business growth in the international market. The complexity of designing today's technology platforms requires profound knowledge in multiple areas. Technology development and commercialization as an ongoing competitive process involves enabling and inhibiting mechanisms, which govern the speed and acceleration of technological innovation. To compete more effectively, potential competitors are using cooptation and pooling their resources for shared gain in areas where they do not compete directly. Thus, a thorough examination of the current paradigms, theories, and frameworks is needed to increase our understanding of the technology-innovation-competitiveness linkages of business growth. This book brings together recent developments and methodological contributions within technological innovation, international competitiveness, and business growth that bridge the existing gaps and simultaneously advances the debate on this research topic.

*Managing Green Business Model Transformations* Axel Sommer 2012-05-20 Environmental sustainability creates both tremendous business opportunities and formidable threats to established companies across

virtually all industry sectors. Yet many companies tackle the issue in a superficial or passive way, rather than considering fundamental changes to their existing business models. By ignoring the opportunities of Green Business Model Transformations, companies exclude themselves from a large variety of potential means to create economic value. In addition to ordinary product and process innovations, they can change "the rules of the game" within an industry towards environmental sustainability. Green Business Model Transformations, however, are challenging ventures: New, green business models with all their uncertainties and inherent complex systemic characteristics are difficult to design, assess, and implement successfully, particularly in the context of established companies that often entail complex structures and considerable inertia. As a result, there is a great need for guidance in management practice. This publication addresses this need with a general approach to Managing Green Business Model Transformations that is based on a broad theoretical foundation, illustrated by many real-world examples from various industry sectors.

*The Business of Less* Roland Geyer 2021-09-07  
*The Business of Less* rewrites the book on business and the environment. For the last thirty years, corporate sustainability was synonymous with the pursuit of 'eco-efficiency' and 'win-win' opportunities. The notion of 'eco-efficiency' gives us the illusion that we can achieve environmental sustainability without having to question the pursuit of never-ending economic growth. The 'win-win' paradigm is meant to assure us that companies can be protectors of the environment whilst also being profit maximizers. It is abundantly clear that the state of the natural environment has further degraded instead of improved. This book introduces a new paradigm designed to finally reconcile business and the environment. It is called 'net green', which means that in these times of ecological overshoot businesses need to reduce total environmental impact and not just improve the eco-efficiency of their products. The book also introduces and explains the four pollution prevention principles 'again', 'different', 'less', and 'labor, not materials'. Together, 'net green' and the four pollution prevention principles provide a road map, for businesses and for every household, to a world in which human prosperity and a healthy environment are no longer at odds. *The Business of Less* is full of anecdotes and examples. This brings its material to life and makes the book not only very accessible, but also hugely applicable for everyone who is worried about the fate of our planet and is looking for answers.
